All No. 1, Two-Year-Old Plants

Paul's Scarlet Climber

The flowers are intense vivid scarlet, semi-double and very freely produced in clusters of from 3 to 20 blooms on long, much-branched canes, the plant being a mass of bloom from top to bottom. The flowers do not fade but maintain their brilliant color until the last petal drops. For a brilliant mass of spring color this one just CAN'T be beat. Hardy even in sub-zero climates. Paul's Scarlet does not bloom the first year after planting; it makes growth the first year and blooms the second year on the old wood produced the year before. We offer for the first time, so far as we know, *one-year budded cuttings* at less than one-half the price for the two-year-old plants. You not only save one-half of the cost, but you get one more year of blooming life from the plant, and the budded cutting will bloom just as soon as the more expensive ones.
